CONNECTIVITY OPTIONS

Davis weather stations provide several ways to store and upload your weather data.

WEATHERLINK CONSOLE

We recommend the WeatherLink Console. The console is able to show up to 21 different variables on its bright 6.5" LCD screen, with the capability to store, view, and upload data to and from the WeatherLink Cloud.

WEATHERLINK LIVE

The WeatherLink Console's predecessor and the first to natively support the new WeatherLink Cloud service. Connect more than 80 sensors to a single base station. Best for complex deployments.

WEATHER ENVOY

Davis' traditional console-less option. Can be used outdoors within protective shielding, the addition of a data logger offers remote data storage.

DATA LOGGER

Initially intended to provide data connectivity for Davis' classic consoles, the data logger is now used with the Weather Envoy for data storage.

If you intend to share your weather data online, we **strongly** recommend either the WeatherLink Live or Console for the easiest setup, and best reliability.

WEATHERLINK SUBSCRIPTION (FREE OR PAID) REQUIRED TO SHARE DATA ONLINE.
