Thank you for supporting my small American business! Parts are sourced from other small manufacturers and artisans and built to last in my upstate New York shop. Since I started in 1999, I've worked hard to build a company that provides top quality products and a reliable shopping experience.

WORLD'S COOLEST RAIN GAUGE®

MAKING RAIN FUN SINCE 1999

For best results, place the gauge at least 15' from any obstructions. Clean the flute and tube with soap and water only. Please don't remove the foam insert! Your gauge won't work without it! And yes, it's ok to leave your gauge out in winter!

After it rains, read the highest number showing.

Don't Remove The Foam Float!

What's so cool about the World's Coolest Rain Gauge? Science, that's what! It's based on the Archimedean principle of water displacement. Water flows into the outer sleeve and the blue tube floats up.
